

Flygt Jet Aerator

SUBMERSIBLE MECHANICAL AERATOR

This stand-alone aeration system is providing reliable, convenient and affordable oxygen transfer. It is designed for use in activated sludge processes, sludge holding or digestion tanks and is ideal for small and medium-sized wastewater treatment plants or industrial facilities.

Robust, clog-free equipment

Behind the Flygt jet aerator's reliability is the innovative Flygt pumps N-technology, renowned for its proven non-clogging design, ease of use and minimal maintenance.

Low-cost plug-and-play installation

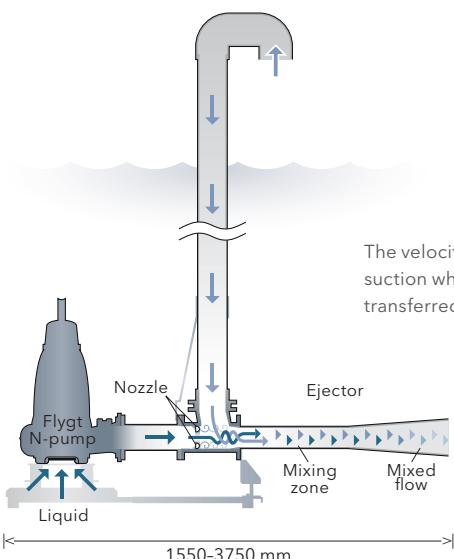

This convenient lift-in, lift-out aeration system offers a cost-effective alternative to fixed mechanical or diffused aeration systems. The aerator can be installed quickly without emptying the existing tank.

Better working environment

Because the submersible Flygt jet aerator rests on the tank bottom, there's significantly less spray and lower noise levels and vibrations, compared to surface aerators. This greatly improves the working environment.

Flexibility to customize

The Flygt jet aerator comes in seven distinct sizes, to meet various needs on aeration performance. For demanding applications, improved durability can be achieved by Ejectors in stainless steel instead of standard galvanized steel. Hard-Iron™ N-impellers instead of standard hardened cast iron are ideal for abrasive and/or corrosive applications.

Installation

- Stand alone S
- Fixed with guide bar system P

Material

- Ejector housing Cast iron or stainless steel
- Nozzle PEHD
- Outlet pipe Stainless steel
- Fasteners Stainless steel
- Gasket Rubber
- Chain sling Stainless steel
- Suction pipe and inlet bend PVC-U* or stainless steel
- Pump Cast iron
- (Check details in pump specifications)

* Min. pressure class PN 10

Compulsory

Cooling jacket for N-3153, N-3171 and N-3202

Recommended

Hard-Iron™ impeller in corrosive or erosive applications. Ejector system in stainless steel version for pH>11.

Process data

- Liquid temperature +40 °C (max.)
- Liquid pH range pH 5.5-14
- Liquid density 1100 kg/m³ (max.)
- Max. total solids content 4(8)%

For temperatures higher than 40°C and/or total solids content higher than 4%, contact your local Xylem representative.

Flygt is a brand of Xylem, whose 12,000 employees are addressing the most complex issues in the global water market.
